

Installation Manual for Lateral Side Glass

4 – SIDE DOOR GLASS INSTALLATION

Fig.4 – Installed Glass

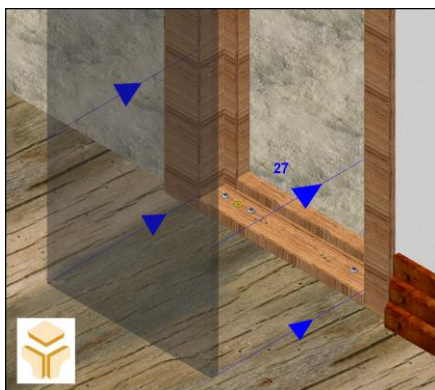

Fig. 4.1 – Glass installation

Fig. 4.2 – Glass fixation

Installation Manual for Lateral Side Glass

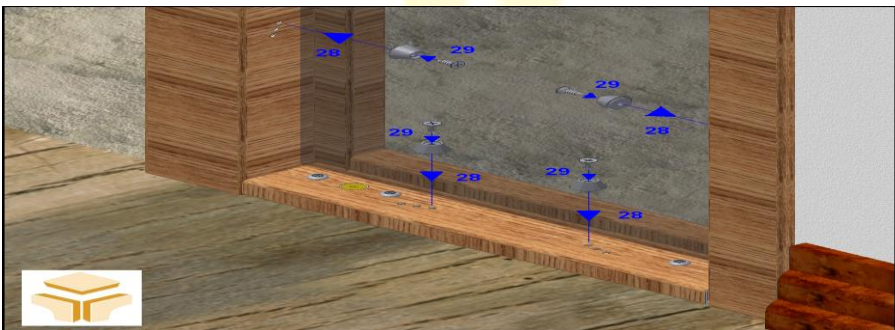

The glass should be installed with laying measures, Height & Width that can mediate between the frame central column, jamb, lintel and bottom frame of the lateral side glass. Lean the glass carefully (27) (fig.4.1)

NOTE: Install, only, 12, 14, 16 mm glass thick.

Fig. 4.3 – Glass fixation (Drilled holes for 12, 14 e 16 mm glass thick)

Notice that along the frame central column, jamb, lintel and bottom frame of the lateral side glass, there are 3 drilled holes diagonally disposed. The holes that are more distant from the glass are for 16mm glass, the ones in the middle for 14mm glass and the ones nearer, for 12mm glass (fig. 4.3).

Installation Manual for Lateral Side Glass

Fig. 4.4.1 – Glass installation putting on the nuts with metallic piece (29) for the metal edging strips fixation)

Install the glass with the pretended thickness (12, 14, 16 mm) and screw the nuts with metallic piece on (29), for fixing the metal edging strips holding on the glass (28) (29) as shown above (fig. 4.4.1).

NOTE: The metallic piece (shown above fig.29), is to grip the edging strips.

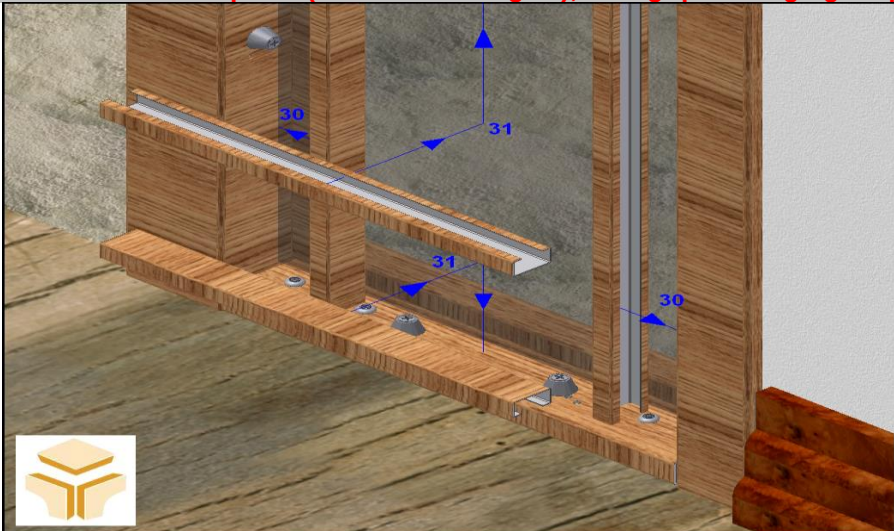

Fig. 4.4.2 – Glass fixation (installing edging strips holding on the glass)

Finally place the edging strips, “clipping” them over the nuts with metallic piece, be sure at the same time, if the edging strips perfectly lean against the glass. The laterals (longer) edging strip must be placed first (30), (31)(fig. 4.4.2).

NOTE: Do not misguide placing the nuts with the metallic piece and the edging strips on, according to the thickness of the glass. If the edging strips are misplaced, getting them off will be very difficult.
